

Hamilton Acrylic Admix Bonder

Formulated for Hamilton compounds and textures. For increased bond to questionable surfaces.

MADE IN THE USA

What is it?

Acrylic Admix Bonder is formulated for Hamilton products as a partial or whole replacement for water when mixing. It adds adhesion and water resistance to questionable surfaces when applying drywall finishing products. It can be used in joint compounds, textures, and setting compounds.

Application:

Surfaces must be dry, clean, firm and free from dust, dirt, oil, wax, loose paint, plaster or contaminants that would hinder bond. Acrylic Admix can be used by adding two cups per bag/box or as a complete replacement for water depending on adhesion requirement. Do not apply at temperatures below 50° F.

Cleanup:

Wash tools with water before materials harden.

Storage:

Keep this product tightly sealed. Store in a dry location at room temperature. Keep the product from freezing.
